

Minimally Invasive Gyn Surgery Using the da Vinci Robot

Los Olivos physicians are now trained to offer our patients the most advanced minimally invasive approach to hysterectomy and myomectomy available today — *da Vinci*[®] surgery. Using the *da Vinci* Surgical System, we can treat a wide range of gynecologic conditions — from chronic pelvic pain to abnormal bleeding — with just a few small incisions. This allows you to get back to your life faster without the usual recovery following major surgery.

A *da Vinci* Hysterectomy or Myomectomy offers women the following potential benefits:

- Significantly less pain
- Less blood loss and need for transfusion
- Less risk of infection
- Shorter hospital stay
- Quicker recovery and return to normal activities
- Small incisions for minimal scarring
- Better outcomes and patient satisfaction, in many cases

Please contact our office to schedule a consultation to learn more about *da Vinci* Hysterectomy and Myomectomy.
